SUBUNIT: HOMODIMER.
SUBCELLULAR LOCATION: Lysosomal.
DISEASE: DEFECTS IN ARSB ARE THE CAUSE OF MAROTEAUX-LAMY
SYNDROME; ALSO KNOWN AS MUCOPOLYSACCHARIDOSIS TYPE VI (MPS-VI)
MPS-VI HAS BEEN DESCRIBED IN SIAMESE CATS.
SIMILARITY: BELONGS TO THE SULFATASE FAMILY.
                                                              Genomics 14:403'411(1992).
-!- CATALYTIC ACTIVITY: Hydrolysis of the 4-sulfate groups of the acetyl-D-galactosamine 4-sulfate units of chondroitin sulfate

"Fifteen polymorphisms in the N-acetylgalactosamine-6-sulfate
"Tifteen polymorphisms in the N-acetylgalactosamine diagnostic implications in Morquio disease.";
"Hum. Mutat. Suppl. 1:542-546(1998).

-!- ATALYTIC ACTIVITY: Hydrolysis of the 6-sulfate groups of the N-acetyl-D-galactose 6-sulfate units of chondroitin sulfate and of the D-galactose 6-sulfate units of keratan sulfate and of the D-galactose 6-sulfate units of keratan sulfate and of the D-galactose 6-sulfate units of keratan sulfate."

-!- SUBGUIT: OLIGOMER OF DISULFIDE LINKED 40- AND 15-kDa POLYPEPTIDES.
-!- SUBGELGUAR LOCATION: Lysosomal.
-!- SUBGELGUAR LOCATION: Lysosomal.
-!- Type ITA (MPS-IVA) (also known as Morquio A syndrome) which is characterized by specific spondyloepiphyseal dysplasia, short trunk dwarfism, coxa valga, odontoid hypoplasia, corneal opacities, preservation of intelligence, and excessive urinary excretion of keratan sulfate and chondroitin-6-sulfate. Severely affected patients usually die of cardiopulmonary disturbance or cervical cord compression in the second or third decade of life.
                                                                                                                                                                    "Identification of 31 novel mutations in the N-acetylgalactosamine-6-sulfatase gene reveals excessive allelic heterogeneity among patients with Morquio A syndrome.";

SUBCELLULAR LOCATION: GOLGI STACK.

PITSSUE SPECIFICITY: EXPRESSED IN THE PANCREAS, LIVER, AND KIDNEY.

PTHIS SPECIFICITY: EXPRESSED IN THE PANCREAS.

DISEASE: DEFECTS IN ARSE ARE THE CAUSE OF X-LINKED RECESSIVE

ENDNDROPSPELASIA PUNCTATA (CDPX). A COMENITAL DEFECT OF BONE AND

CARTILAGE DEVELOPMENT CHARACTERIZED BY ABERRANT BONE

MINERALIZATION, SEVERE UNDERDEVELOPMENT OF NASAL CARTILAGE, AND

BISTALL PHALANCEAL HYPOPLASIA. THIS DISEASE CAN ALSO BE INDUCED BY

INHIBITION WITH THE DRUG WARRARIN.

SIMILARITY: BELONGS TO THE SULFATASE FAMILY.

acute Novel human sulfatase polypeptides useful for treating and diagr sulfatase-related disorders such as cerebrovascular diseases, ac meningitis, multiple sclerosis, degenerative diseases and tumor Novel human sulfatase polypeptides sulfatase-related disorders such as

English Fig 15; 180pp; Claim 2;

The invention provides 22438, 23533, 25278 or 26212 human sulfatase polypeptides and polynucleotides. The sulfatase genes and polypeptides are useful for treating disorders involving the brain such as cerebrovascular diseases, infections such as acute meningitis, demyelinating diseases including multiple sclerosis, degenerative diseases affecting the cerebral cortex including Alzheimer's disease and Pick disease, spinocerebellar degenerations including spinocerebellar degenerative diseases affecting motor neurons including amyotrophic lateral sclerosis, inborn errors of metabolism such as leukodystrophies, toxic and acquired metabolic diseases, including vitamin deficiencies, and neurocutaneous syndromes (phakamatoses) including neurofibromotosis. sulfatase polypeptide human 23553 ø represents present sequence encoding

primers for PRO POLYPEPTIGES of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal is include dogs, cars, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human to be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, creast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAX33381 to AAX34338, and AAX41685 to AAX41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                             New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders -

                                                                                                                                                                                                                                                                                        The invention provides 22438, 23553, 25278 or 26212 human sulfatase polypeptides and polynucleotides. The sulfatase genes and polypeptides are useful for treating disorders involving the brain such as cerebrovascular diseases, infections such as acute meningitis, demyelinating diseases including multiple sclerosis, degenerative diseases sfecting the cerebral cortex including Alzheimer's disease and Pick disease, spinocerebellar degenerations including spinocerebellar ataxias including Friedreich ataxia, and ataxia telangiectasia, degenerative diseases affecting motor neurons including amyotrophic lateral sclerosis, inborn errors of metabolism such as leukodystrophies, toxic and acquired metabolic diseases, including vitamin deficiencies, and neurocutaneous syndromes (phakamatoses) including neurofibromotosis.

Claim 1; Page 699; 894pp; English

proteins or their active domains. The polypeptides, polynucleotides and proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of for treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to target antibodies/elicit an immune response, to determine duantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon,

ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia. Alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, allergy, asthma, graft-versus-host disease, eczema, haemophilia, thrombosis, anti-inflammatory disease, nervous system disorders, and infection. The present sequence encodes a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1023

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anamia, Alzheimer's, Parkinson's and Huntington's diseases, amplotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and

libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used a hidgmosis and prognosis of diseases and disorders (e.g. identification of

The invention provides 22438, 23553, 25278 or 26212 human sulfatase polypeptides and polynucleotides. The sulfatase genes and polypeptides are useful for treating disorders livoviving the brain such as degenerative described in the cerebrovascular diseases, infections such as acute meningtis, demyelinating diseases including multiple sclerosis, degenerative diseases affecting the cerebral cortex including Alzhehumer's disease attaxias including spinocerebellar and pick disease, spinocerebellar degenerations including spinocerebellar degenerative diseases affecting motor neurons including amyotrophic lateral sclerosis, inborn errors of metabolism such as leukodystrophies, toxic and acquired metabolic diseases, including vitamin deficiencies, and neurocutaneous syndromes (phakamatoses) including neurofibromotosis. The present sequence represents a human 25278 sulfatase polypeptide encoding cDNA.

The invention provides 22438, 23553, 25278 or 26212 human sulfatase polypeptides and polynucleotides. The sulfatase genes and polypeptides are useful for treating disorders involving the brain such as cerebrovascular diseases, infections such as acute meningitis, demyelinating diseases including multiple sclerosis, degenerative diseases affecting the cerebral cortex including Alzheimer's disease and Pick disease, spinocerebellar degenerations including spinocerebellar ataxias including Friedreich ataxia, and ataxia telangiectesia, degenerative diseases affecting motor neurons including amyotrophic tateral sclerosis, inborn errors of metabolism such as leukodystrophics, toxic and acquired metabolic diseases, including vitamin deficiencies, and neurocutaneous syndromes (phakamatoses) including neurofibromotosis.

Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases

Claim 4; SEQ ID No 431; 1180pp; English.

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU3814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AIzheimer's disorders (e.g. arthritis), neurological disorders (e.g. atherosclerosis), metabolic disorders (e.g. phenylkeronuria), inflammatory disorders (e.g. arthritis), neurological disorders (e.g. atherosclerosis), metabolic disorders (e.g. phenylkeronuria), inflammatory disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynuclectides of the invention can also be used in gene therapy. AAS40785-AAS41684 represent cDNA sequences encoding for the novel human coryme polypeptides of the invention. at ftp.wipo.int/pub/published\_pct\_sequences.

Sequence 629 BP; 189 A; 151 C; 124 G; 162 T; 3 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       868                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö                                                                                                                                                                                                                                                                                                                                                                                                                                                               ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of novel human respiratory antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polyuucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAS28161-AAS28764 represent genomic sequences encoding for novel Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the respiratory system including respiratory cancers and also for testing and detection e.g. diagnosis -

                                                                                                                                                                                                                                                         genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of
                                                                                                                                                                                                          AAA00010 to AAA02716 represent polynucleotides isolated from cDNA
libraries constructed from human colon cancer cell lines. The present
invention also describes a method of detecting differentially expressed

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                    detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gtcctgggatgtgtggctatgacttgtatgaaaacgacaatgctg---cctgggactatg 1020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            acaatggcatatactccacacagatgtacactcagagagtacagcaaatcttagcttccc 1080
